

COVID - 19

Rapid/Point of Care Testing

NOW AVAILABLE

ECS Safety Services is excited to announce that we now have a device available for rapid COVID-19 antigen testing!

We now utilize Health Canada approved testing devices that can deliver results within 15 minutes! The mid-nare test is simply performed by swabbing the inside of the nostrils; this process is much less invasive than the standard nasopharyngeal test which helps ensure the comfort of your employees while still offering a high degree of accuracy.

This service is now available in all ECS branch offices and the portability of these devices also allows our trained Health Care Professionals to travel to your office or field location to complete testing with results available to you before we leave. All safety precautions will be in place and provided by our staff. The only requirement of our client will be to provide a confidential and appropriate area for testing and delivering results. Screening results will be released by our staff as soon as they become available and will be given to both the employee and employer.

When used in addition to daily screening, physical distancing, wearing masks, etc...this testing can help reduce workplace exposures.

**Contact us to start booking
COVID-19 testing today!**

Benefits:

- ⇒ **Results within 15 minutes!**
- ⇒ **Less invasive form of testing**
- ⇒ **Portability allows for on-site testing which leads to less disruption to your employees' work day**
